

Typical Rollshutter Measuring Guide

Between Jamb (Inside Opening) Application

Provide the "A2" dimension and
the "B2" dimension.

A2: overall unit width (outside rail dimension)
Measure the opening at the top, middle and bottom. Take the smallest measurement, and deduct 1/8" for clearance. That will be your A2.

B1: guide rail height (opening height less the height of the panel box)
B2: opening height (guide rail height plus the panel box height)
